STEP 1: Get a 7 – 10 cm piece of filter paper

STEP 2: Fold it in half

STEP 3: Fold it again to a quarter size.

STEP 4: Fold a small triangle of all layers through to the point.

STEP 5: Continue the “accordion folding” through the entire filter paper.

STEP 6: Allow the open filter paper to steam over a funnel with warmed solvent. This will be used in the hot recrystallization.
